Former professional Muay Thai fighter turned backend engineer — 12+ years building scalable data systems, APIs, and developer tooling across gaming, enterprise SaaS, and AI. Currently at PaceAI, designing LLM-integrated infrastructure and internal platforms on AWS. Known for ownership-driven engineering, cross-team collaboration, and delivering measurable business impact

Professional Experience

Founding Backend Engineer (Python, FastAPI, Postgresql, TypeScript, React, Pulumi, AWS)

PaceAI - Palo Alto | Nov 2025 - Apr 2026

- Solved major customer painpoint by reducing classroom loads by 96% through re-architecting core classrooms APIs. Optimizing our data access patterns through batching, indexing and pagination along with a comprehensive unit testing suite and runtime configurations to swap and test algorithms.
- Refactored a monolithic classrooms API into a Controller–Service–Repository architecture, decoupling business logic, persistence, and API layers; improved testability and reduced regression risk while enabling faster feature iteration.
- Partnered with the lead ML engineer to design a multimodal (image + text) ingestion pipeline for customer integrations, standardizing model interfaces via Protocol and Adapter patterns across foundation and locally hosted Hugging Face models.
- Built student class time data pipeline and Monthly Report service to automate the generation of monthly excel reports on student progress and activity.
- Designed, Deployed and Managed AWS infrastructure integrating our API Tutoring service with our 3rd party customers GED and MedCerts. Provisioning ECS, EICE Access Nodes, WAF, CDN, ECS, and S3 infrastructure.

Senior Server & Tools Engineer (PHP, Vue, AWS, MySQL, Snowflake)

Electronic Arts – Redwood Shores, CA | Apr 2021 – July 2025 (Covet Fashion)

- Simplified architecture by integrating EA's Identity & Groups Service into login, enabling a modern Clan system and deprecating an unsupported Ejabberd chat backend.

- Migrated BI workflows from Jenkins-scheduled Python scripts querying MySQL and Snowflake to a unified Snowflake data pipeline, reducing operational complexity and improving query performance; supported player purchasing analytics that increased in-game purchases by 12%.
- Modernized the internal CMS tool, upgrading (1.0 -> 3.0) to the latest Vue and webpack stacks, introducing a workflow-based configuration system while maintaining backward compatibility.
- Created and shared EA Identity and Groups Service innersource library, presented during Engineering Guild, the library was adopted and supported by millions of players in Covet Fashion, Design Home and Table & Taste.
- Improved team velocity by mentoring junior engineers, creating documentation, and leading knowledge transfers, cutting onboarding time significantly.
- Optimized Garment & Avatar rendering workflows, cutting web app load times by 62% and improving personalization features for millions of players.
- Enhanced character customization via modern rendering integration, increasing inclusion and player satisfaction.
- Built new interactive modules for content editors, enabling faster iteration and a 40% reduction in manual asset pipeline tasks through interactive Photoshop scripting integrations.
- Integrated Microsoft Entra authorization into the CMS tool, replacing the legacy Okta-based login system to streamline authentication and align with updated enterprise standards.

Server Engineer (RubyOnRails, React, Java, Spring Boot, GCP)

Glu Mobile – San Francisco, CA | Feb 2019 – 2021 (Diner Dash Adventures, Cooking Dash)

- Built internal developer platform enabling real-time content publishing for non-engineering teams supporting designers with real-time content publishing and level management.
- Built self-service UI validation “Release Checklist” tools for designers that reduced release cycle time by 45%.
- Developed dashboards and management UIs for QA and customer support teams, improving visibility into player data and reducing support handling time.
- Built and maintained critical APIs for QA tools, player management, and cheater detection, enabling effective customer service workflows.
- Led the Engineering Guild, organizing monthly tech talks to promote cross-team technical excellence.
- Containerized legacy services, migrating sunsetted EBS services to Docker for long-term maintainability.

Software Engineer – Platform Services (Java, SpringBoot, Oracle, HANA)

SAP SuccessFactors – South San Francisco, CA | Jan 2014 – Feb 2019

- Led schema migration from Oracle to SAP HANA, saving over \$5M annually and improving DB performance by 30% while integrating OLAP.

- Architected schema modeling/migration microservices serving 10,000+ enterprise clients with zero-downtime quarterly releases.
- Explored initial PoC of integrating Kafka and SAP Hana with SuccessFactors platform.
- Automated release workflows, reducing manual errors to 0 and slashing downtime by 40%.
- Developed provisioning APIs, reducing new customer setup from multiple days to a few hours.
- Selected for Expedition 2020, SAP's premier technical leadership program.

Associate Systems Engineer (Java, ElasticSearch)

E*TRADE Financial – Menlo Park, CA | Jun 2012 – Dec 2013

- Built custom log parsers and lightweight APIs to enhance ElasticSearch analytics and support real-time data correlation.
- Prototyped visualization of engineering metrics using Neo4j and open-source graph tools.

Software QA Intern (Java, JProfiler)

Agilience – San Jose, CA | Jun 2011 – Aug 2011

- Integrated JProfiler into performance testing suites and automated regression testing with Selenium.

Education

Purdue University

B.S. in Electrical and Computer Engineering

Recipient, AMD Innovation & Design Award (2008)

Technical Skills

Languages: Java, Ruby, Python, JavaScript, PHP, C, Go, TypeScript

Databases: PostgreSQL, MySQL, MongoDB, Oracle, HANA, ElasticSearch, Couchbase, Snowflake

Technologies: FastAPI, Ruby on Rails, Django, Node.js, Vue, React, Docker, AWS, GCP, Kubernetes

Personal Projects

- **Virya.fit** - full-stack project for an e-commerce platform for a sidequest of an athleisure brand.
- **Nataraja** - multi-modal AI routing system integrating locally hosted Qwen/Ollama models with hosted LLM providers, cost-aware inference routing.
 - **Social Media Agent** - Instagram marketing workflow, multimodal content generation, media asset pipeline and publishing orchestration
 - **Research Agent** - Retrieval and summarization agent for ingesting intriguing web sources and generating structured markdowns.
 - **Personal Site Agent** - AI-assisted blog generation workflows for documenting learning notes and experiments in summaries and content generation.
