Twelve years of backend engineering, a professional Muay Thai career, and years on the yoga mat — one kind of discipline pointed at three things. Senior Backend Engineer building large-scale online services, developer platforms, analytics, and content-management tools across gaming, enterprise SaaS, and AI: Pace AI, Electronic Arts, Glu Mobile, shipping systems that serve millions. Retired from fighting to put that focus into software and into Virya, the athletic apparel brand I founded for martial arts, yoga, and running.

VENTURES

Founder · Virya — Oakland, CA Aug 2025 – Present

Men's athletic & athleisure apparel · virya.fit

- Founded Virya, a men's athletic and athleisure apparel brand for yoga, martial arts, bouldering, and running — gear for the pursuits of the modern hero.
- Led apparel development from concept through prototyping, partnering with tailors to draft and iterate the brand's first garment patterns, now in testing.
- Designed and built the brand's e-commerce platform (virya.fit), engineering custom Inventory and Supplier Ordering services with React, TypeScript, and AWS.
- Drive go-to-market and operations, coordinating sourcing and production planning with factories and suppliers.
- Built the brand's agentic go-to-market and marketing system on top of Nataraja (my multi-model AI framework), automating multimodal content publishing to Instagram and Discord, monthly newsletter drafting, and site SEO.

PROFESSIONAL EXPERIENCE

Founding Backend Engineer · PaceAI — Palo Alto, CA Nov 2025 – Jun 2026

Python, FastAPI, PostgreSQL, TypeScript, React, Pulumi, AWS

- Reduced classroom database load by 96% by re-architecting the core classrooms APIs — optimizing data-access patterns with batching, indexing, and pagination, backed by a comprehensive unit-test suite and runtime configuration to swap and benchmark algorithms.
- Refactored a monolithic classrooms API into a Controller–Service–Repository architecture, decoupling business logic, persistence, and API layers to improve testability, reduce regression risk, and accelerate feature iteration.
- Partnered with the lead ML engineer to design a multimodal (image + text) ingestion pipeline for customer integrations, standardizing model interfaces with the Protocol and Adapter patterns across foundation and locally hosted Hugging Face models.
- Built a student class-time data pipeline and Monthly Report service that automated generation of monthly Excel reports on student progress and activity.
- Architected and managed AWS infrastructure — ECS, EC2, CloudFront, WAF, S3, and secure networking — supporting large-scale customer integrations.

Senior Server & Tools Engineer · Electronic Arts — Redwood Shores, CA Apr 2021 – Jul 2025

Covet Fashion · PHP, Vue, AWS, MySQL, Snowflake, Redis, SQS

- Built and maintained backend services supporting millions of players across live-service mobile titles.
- Migrated analytics pipelines from Jenkins/Python workflows to a Snowflake-based architecture, improving reliability and reducing operational overhead while supporting initiatives that grew in-game purchases by 12%.
- Optimized garment and avatar rendering workflows, cutting web-app load times by 62% while expanding character customization and personalization for millions of players.
- Built interactive editor modules with Photoshop scripting integrations, speeding content iteration and cutting manual asset-pipeline tasks by 40%.
- Integrated the EA Identity & Groups platform into Covet Fashion, enabling modern social features and retiring legacy chat infrastructure.
- Developed shared platform libraries adopted across multiple EA titles, including Covet Fashion, Design Home, and Table & Taste.
- Boosted team velocity by mentoring junior engineers, authoring documentation, and leading knowledge transfers that significantly cut onboarding time.

Server Engineer · Glu Mobile — San Francisco, CA Feb 2019 – 2021

Diner Dash Adventures, Cooking Dash · Java, Spring Boot, Ruby on Rails, React, GCP, Redis, SQS

- Developed backend services and internal platforms in Java and Spring Boot for live-service mobile games including Diner Dash Adventures and Cooking Dash.
- Built real-time content-publishing systems that let designers deploy game content without engineering intervention.

- Reduced release-cycle time by 45% through automated validation and self-service release tooling.
- Developed APIs and operational tooling for player management, QA workflows, customer support, and cheat detection.
- Containerized legacy backend services with Docker and modernized deployment workflows.
- Led the Engineering Guild, organizing monthly tech talks to drive cross-team technical excellence.

Software Engineer, Platform Services · SAP SuccessFactors — South San Francisco, CA Jan 2014 – Feb 2019

Java, Spring Boot, Oracle, SAP HANA

- Led a schema migration from Oracle to SAP HANA that saved over \$5M annually and improved database performance by 30%, while integrating OLAP capabilities.
- Architected schema-modeling and migration microservices serving 10,000+ enterprise clients with zero-downtime quarterly releases.
- Developed provisioning APIs that cut new-customer setup from several days to a few hours.
- Automated release workflows, eliminating manual errors and cutting downtime by 40%.
- Delivered an initial PoC integrating Kafka and SAP HANA with the SuccessFactors platform.
- Selected for Expedition 2020, SAP's premier technical leadership program.

Associate Systems Engineer · E*TRADE Financial — Menlo Park, CA Jun 2012 – Dec 2013

Java, Elasticsearch

- Built custom log parsers and lightweight APIs to enhance Elasticsearch analytics and enable real-time data correlation.
- Prototyped engineering-metrics visualizations using Neo4j and open-source graph tools.

Software QA Intern · Agilience — San Jose, CA Jun 2011 – Aug 2011

Java, JProfiler

- Integrated JProfiler into performance-testing suites and automated regression testing with Selenium.

EDUCATION

Purdue University — B.S. in Electrical and Computer Engineering

Recipient, AMD Innovation & Design Award (2008)

RYT-200 Yoga Teacher Training — Hot Spot Yoga, Oakland, CA (2024)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, Ruby, PHP, Go, C

Databases: PostgreSQL, pgvector, MySQL, MongoDB, Oracle, SAP HANA, Elasticsearch, Couchbase, Snowflake

Technologies: Spring Boot, FastAPI, Ruby on Rails, Django, Node.js, Vue, React, Docker, Kubernetes, AWS, GCP, Temporal, LiteLLM, Ollama

PERSONAL PROJECTS

Nataraja — a self-hosted, multi-agent AI platform. A Python factory/CLI scaffolds LangChain agents from declarative YAML specs, each governed by a runtime policy engine and served by a local-first LLM router — Ollama with automatic OpenRouter fallback through a self-hosted LiteLLM proxy under per-agent cost budgets. Backed by Postgres/pgvector, orchestrated with Temporal-scheduled workflows, and operated through a FastAPI backend and Next.js dashboard.

- Runtime policy engine enforcing per-agent tool and filesystem permissions, denying high-risk actions like sending email or publishing to social by default until explicitly granted.
- Automated evaluation pipeline pairing structural checks with LLM-as-judge scoring and pass-rate tracking to safeguard agent quality across releases.
- A suite of 18+ purpose-built agents — weekly marketing content with human-approval gates, autonomous research loops feeding a knowledge base, GitHub-triggered architecture and security/performance code review, Discord and email comms, and customer-support and storefront ops powering Virya.
- 3D “City View” dashboard visualizing live agent activity across the platform.

ATHLETICS & TEACHING

Yoga Instructor · Fit Evolution Gym — Oakland, CA | 2024 – 2025

- Taught twice-monthly weekend vinyasa for a U16 boys AAU basketball team, sequencing around mobility, recovery, and injury prevention for teenage athletes.
- RYT-200 certified through Hot Spot Yoga's teacher training program.

Professional Muay Thai Fighter | 2023-2025

- Fought two years professionally after eight years of semi-pro competition, training and cutting weight around a full-time engineering career. Retired to focus on software and founding Virya.
